Cabinet Care Instruction

Cleaning

Avoid harsh chemicals when cleaning your cabinets.

Wipe spills promptly.

Avoid excess water on cabinet surfaces.

Avoid direct heat or steam as it may damage the cabinet coating.

Maintain a humidity level between 30-45%, not only is this ideal for your kitchen cabinets it is also ideal home conditions. Achieve this by using a humidifier/dehumidifier depending on your needs.

Avoid hitting cabinets to prevent dents and scratches that can affect the integrity of the coating. Minor scratches can be repaired by using; touch up sticks, high-grade polish, or paint repair kit

Follow these simple steps to keep your cabinets looking good as new!
